

Savo S3

Savo S3 is equipped with the ergonomic Savo Floating Tilt® function, where the seat and back move independently of each other. The chair also features an articulated backrest that keeps on supporting you as you lean right back. Feel how the chair's articulated back follows your own, naturally supporting the curve of your back, no matter how you sit. It's a patented solution. To top it all, the head support follows the movement of the chair. Lean back and enjoy the difference!

Savo S3 is developed to fit all. All the functions are easy to use. Needless to say, adjusting the Savo S3 is exceptionally straightforward and logical. You can mount or remove head support and armrests quickly and easily. Backrest angle lockable in several positions.

Savo S3
